

May Newsletter

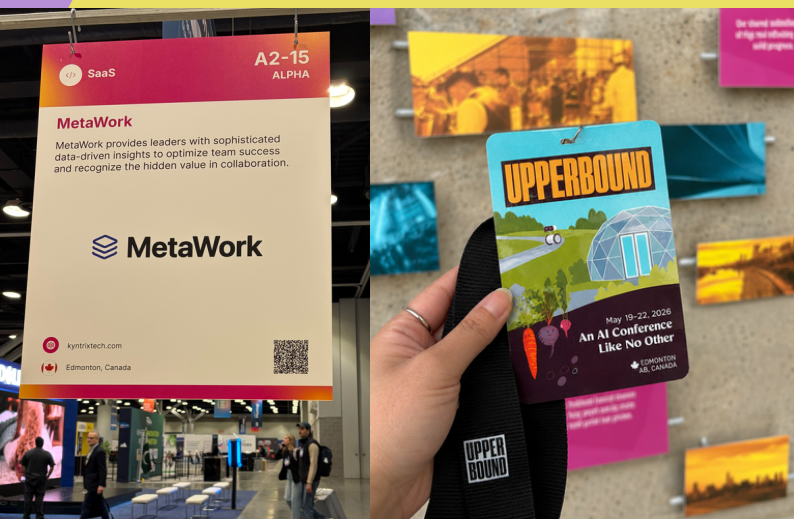

May was an exciting month for Kyntrix Technology Solutions Ltd. as we connected with Canada's growing innovation and AI ecosystem through Web Summit Vancouver and Upper Bound Edmonton.

WEB SUMMIT VANCOUVER: CONNECTING WITH A GLOBAL TECHNOLOGY COMMUNITY

At Web Summit Vancouver, we had the opportunity to introduce more people to our work, including MetaWork, our organization-level intelligence platform designed to help leaders understand operational strain, workflow friction, coordination pressure, and invisible work — without employee surveillance.

UPPER BOUND EDMONTON

We continued learning from Alberta's AI community and exploring how artificial intelligence can be used in practical, responsible, and human-centered ways. The event reinforced our belief that AI should support better decision-making, stronger systems, and healthier organizations — not replace human judgment.

SPOTLIGHT

Across both events, one message was clear: organizations are interested in AI and digital transformation, but they need tools that are secure, understandable, ethical, and useful in real-world operations.
